

PART A: Introduction			
Program: Degree		Class: B.Sc.	Year: III Year
Session: 2023-24			
Subject: Computer Science			
1.	Course Code	S3-COSC2D	
2.	Course Title	Programming with Python (Group A – Paper II) (Theory)	
3.	Course Type (Core Course/Elective/Generic Elective/ Vocational)	Discipline Specific Elective	
4.	Pre-Requisite (if any)	To study this course, a student must have successfully completed the course on Programming at Certificate/Diploma Levels. This course can be opted as an elective by the students of Computer Science.	
5.	Course Learning Outcomes(CLO)	After studying this subject, students shall be able to – • Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements. • Express proficiency in the handling of strings, functions and file handling. • Determine the methods to create and manipulate Python programs by utilizing the data structures like lists, dictionaries, tuples and sets. • Articulate the Object-Oriented Programming concepts such as encapsulation, inheritance and polymorphism as used in Python with class, modules and packages. • Identify the commonly used operations involving database connectivity and use of tkinter for GUI programming.	
6.	Credit Value	Theory - 4 Credits	
7.	Total Marks	Max. Marks : 30+70	Min. Passing Marks: 35
PART B: Content of the Course			
No. of Lectures (in hours per week): 2 Lectures per week			
Total No. of Lectures: 60 Hrs.			
Module	Topics		No. of Lectures
I	Python Basics : Python interpreter, Python idle, dynamically typed and strongly typed features, basic data types, variables, expressions, statements, operators, flow of execution. Input and Output statements, Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else). Iteration: while, for, break, continue, pass, implementing 'for' through range(), 'in' and 'not in' operators for sequence traversal. Creating and executing .py scripts. Keywords: interpreter, while, for, break, continue, scripts.		12
II	Data Structures: Lists- append, extend, insert, index, remove, pop, count, sort, reverse, slicing, list comprehension, Copying a list: deep copy, shallow copy. Tuples- index, count, usage, use of tuples as a swap function. Dictionaries-keys, values, tuples, nested dictionaries, dictionary		12

Abhilasha Kumar
Chairman, Central Board of Studies, Computer Science

	comprehension. Strings- Single line and multi-line strings, formatter, isdigit, isalpha, isalnum, islower, istitle, isspace, title, lower, upper, strip, split, splitlines, join etc. Sets – union, intersection, subset, superset, difference, symmetric difference, copy, add, remove, discard etc. Keywords: <i>index, sort, deep copy, tuples, dictionary, sets, strings.</i>	
III	Functions & File Handling: Inbuilt Functions- id, len, chr, ord etc., defining and calling a function, arguments, global versus local variables, defining and using lambda functions, the map(), filter(), reduce() functions. Working with files : read, write and append modes: r, w, a, x, r+, w+, a+, x+, reading-read(), readline(), readlines(), writing-write(), writelines(), seek(), tell(). Word count, copy file scripts through file handling concepts. Keywords: <i>function, calling a function, arguments, global variables, read, write, copy, seek.</i>	12
IV	Classes, modules and exceptional handling: Classes: Introduction, Member variables and defining methods, constructor, destructor, data encapsulation, inheritance, multiple inheritance, diamond problem solving technique of python. Modules: inbuilt modules- sys, random, time etc. import, from...import, from...import*. Constructing packages, role of __init__.py Exceptional Handling: The try-except-else-finally block, the raise statement, the hierarchy of exceptions, adding exceptions Keywords: <i>class, constructor, destructor, encapsulation, inheritance, exception, modules.</i>	12
V	Database & GUI Programming: Importing sqlite, connecting to database, creating table, insert, select, update, delete, drop tables, accessing and modifying tables through python. Graphical user interfaces; event-driven programming paradigm; tkinter module, creating simple GUI; buttons, labels, entry fields, dialogs; widget attributes – sizes, fonts, colors layouts, nested frames. Keywords: <i>GUI, tables, database, insert, update, drop tables, event- driven programming, dialogs, frames.</i>	12

PART C: Learning Resources

Textbooks, Reference Books, Other Resources

Suggested Readings

Textbooks:

- Taneja Sheetal & Kumar Naveen, “Python Programming: A modular approach”, Pearson.
- Liang Y. Daniel, “Introduction to Programming Using Python”, Pearson.

Reference Books:

- Zed A. Shaw, “Learn Python the Hard Way”, Zed Shaw's Hard Way Series.
- Charles Dierbach, “Introduction to Computer Science using Python”, Wiley.
- Michael T. Goodrich, “Data Structures and Algorithms in Python”, Wiley.

PART D: Assessment and Evaluation		
Suggested Evaluation Methods:		
Maximum Marks: 100		
Continuous Comprehensive Evaluation (CCE): 30 Marks University Exam (UE): 70 Marks		
Internal Assessment : Continuous Comprehensive Evaluation (CCE)	Class Tests/ Presentation / Assignment	30 Marks
External Assessment: University Exam (UE): Time : 03.00 Hours	Section (A) : Very Short Questions Section (B) : Short Questions Section (C) : Long Questions	70 Marks
Any remarks/suggestions:

PART A: Introduction			
Program: Degree		Class: B.Sc.	Year: III Year
Session: 2023-24			
Subject: Computer Science			
1.	Course Code	S3-COSC2Q	
2.	Course Title	Python Programming Lab (Group A – Paper II) (Practical)	
3.	Course Type (Core Course/Elective/Generic Elective/ Vocational)	Discipline Specific Elective	
4.	Pre-Requisite (if any)	To study this course, a student must have successfully completed the course on Programming at Certificate/Diploma Levels. This course can be opted as an elective by the students of Computer Science.	
5.	Course Learning Outcomes(CLO)	After studying this subject, students shall be able to – • Understand the python environment and its text editor. • Code and run the programs. • Debug the program. • Interpret the fundamental Python syntax and semantics and be fluent in the use of Python control flow statements. • Identify the commonly used operations involving database connectivity and use of tkinter for GUI programming.	
6.	Credit Value	Practical - 2 Credits	
7.	Total Marks	Max. Marks : 100	Min. Passing Marks: 35
PART B: Content of the Course			
No. of Lab. Practicals (in hours per week): 1 Lab. per week			
Total No. of Lab.: 30 Hrs.			
	Suggestive List of Practicals		No. of Labs.
	1. Find all numbers which are multiple of 17, but not the multiple of 5, between 2000 and 2500. 2. Print the first 2 and last 3 characters in a given string. Use the string slicing. 3. Write a program that eliminates duplicates in a list. 4. Implement shallow copy and deep copy of a list. 5. Find the largest of n numbers, using a user defined function largest() 6. Write a function that capitalizes all vowels in a string. 7. Read a line containing digits and letters. Write a program to give the count of digits and letters. 8. Write a function myReverse() which receives a string as an input and returns the reverse of the string. 9. Use the list comprehension methodology in python, to generate the squares of all odd numbers in a given list. 10. Generate a dictionary and print the same. The keys of the dictionary should be integers between 1 and 10 (both inclusive). The values should be the cubes of the corresponding keys.		30

Abhilasha Kumar
Chairman, Central Board of Studies, Computer Science

11. Create a nested dictionary. The roll number of a student maps to a dictionary. This inner dictionary will have name, age, and place as keys. Read details of at least three students.	
12. Enter a word. Create a dictionary with the letters of this word as keys, and the corresponding ASCII values as values.	
13. Define a class with three methods: readString(), printString(), writeString(). The first method should read the contents of a file. The second method should print the contents to the console. The third method should write the contents to a new file.	
14. Create a class account which has constructor to input account_no, name, balance from user, print_account() to display the account details, and deposit(), withdraw() which inputs amount and add/subtract them from the total amount of individual object.	
15. Create a database table in sqlite and show the table data in python.	
16. Implement DML commands in SQLite from python interface.	
17. Implement tkinter methods in a python script.

PART D: Assessment and Evaluation

Internal Assessment :

Class Interaction/Quiz

Attendance

Assignments (Charts/ Model)/
Technology Dissemination/ Excursion/
Lab visit/ Industrial Training

30

External Assessment :

Viva voce practical

Practical record file

Table work / Experiments

70

Total Marks: 100
